Helion Management

Users

Stations

HELION

Home / Application Settings

Application settings affect how Helion applications behave. These settings exist at several levels, including system-wide, stations and users.

System Application Settings

These settings are system-wide and control how the system behaves overall.

Station Application Settings

These are settings that can be controlled for individual stations. Begin by choosing the station that you would like to view/modify.

User Application Settings

These are settings that can be controlled for individual users. Begin by choosing the user that you would like to view/modify.

Configure Connections

Application settings are not located in a centralized database; rather they are located through the databases used by Helion applications. The databases that contain settings that should be centrally controlled can be configured here.

Permission Visibility

Configure the visibility of permissions for specific applications here.

Setting Visibility

Configure the visibility of settings for specific applications here.
